

# More Features. More Power.

An imaging-centric solution built in collaboration with radiologists, radiology technologists, imaging administrators and nurses.

And now an even more robust feature set.

## eRAD RIS. Leading the change.

### SECURE CLINICAL COMMUNICATION

#### **RADAR Nudge**

Secure instant messaging direct from the system for radiologists, clinicians

and administrative staff—with the option to include images, files and patient data.

#### **CONNECT Provider Portal**

24/7 access for creating orders or scheduling patients online—or inviting patients to schedule themselves. Immediate access to completed reports, images and online collaboration tools.

#### **Folders**

Organization tool for specialized cases—ideal for tumor boards, teaching presentations, knowledge sharing. Save cases by category with no disruption to normal workflow.

### EFFICIENT DOCUMENT CAPTURE

#### **RADAR SecurePIC**

Secure, bi-directional request to patient for photo capture of any document—prescription, insurance card, referral form.

Easy transfer to patient record to decrease paper bottlenecks.

#### **Print to RIS**

Transfers external documents, such as emails and web pages, directly into the Attachments section of the open patient record for substantial reduction in paper handling.

#### **Inbound Document Capture**

Electronic receipt of incoming faxes and worklists to route attachments to the correct patient record and create new orders, where applicable. Immediate availability of documents across enterprise.

### FASTER PATIENT REGISTRATION

#### **Patient ID Recognition**

Simple scan of patient ID for automatic match to the day's schedule or entire database. Auto-populate a new patient record from scanned ID for reduction in duplicate entries.

#### **Patient Signature Capture**

Digital workflow tool for capture of patient signature. Reduced patient registration times and higher patient satisfaction by collecting signatures electronically.

*“With more than 200 new features developed this year, we’re delivering even greater workflow optimization. We’ve had reactions like ‘I didn’t know I needed that, but now I can’t live without it.’ It’s inspiring to watch our customers harness the power of eRAD RIS to achieve their goals.”*

**Hilary Saltmarsh**  
Product Manager

## ACCURATE DATA ENTRY

### Hide Screen Elements

Ability to hide fields or tabs not pertinent to an organization's workflow. Fields relevant to a certain user group displayed exclusively for that group—for an uncluttered, responsive experience.

### Default Values

Practice-defined defaults for data fields to speed up data entry and drive consistency—with option to enter or select a new value at any time.

### Custom Validation Rules

Practice-specific rules to define field behavior—which field is required and

when, required formats, warnings and hard stops. Validation across fields—an entered value triggering other fields' behavior—supported, with corresponding warnings.

### Spell Check in Notes

Flags on words that may not be spelled correctly in various Notes fields, with options to correct or add a new word. Accuracy propagated anywhere Notes present, including physician portals and diagnostic reports.

## FOCUSED RADIOLOGIST READING

### PACS Viewer and Reporting Mode Customization

Auto-launch of appropriate PACS viewer and reporting mode, based on study criteria. Automatic move between viewers or reporting modes based on practice, modality, radiologist preference and other criteria. On-the-fly adjustments for faster read times.

### Radiologist Reading Group

Auto-routing of exams to practice-defined reading groups for more efficient and balanced study distribution. More direct focus on patient care, rather than workload issues.

### Web Portal Integration

HIE record access directly from reporting screen for immediate grasp of patient information and a more informed diagnosis. Reduced time searching for clinical details.

## CLEAR UTILIZATION MANAGEMENT

### Utilization Management

Workflow for evaluating the appropriateness and medical necessity of procedures—streamlined via worklists and CDS integration. UM status display for admins in Connect Portal.

*“As population health and accountable care organizations take root, imaging providers will be responsible for managing utilization and addressing appropriateness, because many referrers are becoming more dependent on imaging techniques to create better outcomes in the way patients are managed. It's going to be critical to have that information in the RIS.”*

**Howard Berger, M.D.**  
CEO of RadNet

## And did you know about...

### Digital Forms

Dynamic tabs you design for unique needs. Custom, study-dependent screening questions, tech worksheets, and more can be completed digitally and pulled into diagnostic or management reports.

### Insurance Carrier Alerts

With the Real-Time Insurance Verification module, you can decrease denials by creating alerts based on plan information in your Eligible API returns. Warnings tell you when an incorrect carrier is selected or carrier priority is incorrect.
